JAGADISH JANAKIRAMAN

Performance Engineering Lead | Banking & Healthcare

Waterloo, ON, Canada · 437-264-2928 · jagadish.rajasekar@gmail.com · linkedin.com/in/jagadish-janakiraman-8342191a · github.com/jagsrj · jjperformancelabs.pages.dev

EDUCATION

Master of Science, Data Science — University of Arizona, USA
Bachelor of Electronics & Communications Engineering — University of Madras, India

CERTIFICATIONS

PMP · Microsoft Azure Fundamentals · Certified SAFe Agilist · Certified Scrum Professional · Dynatrace Associate · Splunk User · ITIL Foundation · HP Certified LoadRunner Specialist · Sun Certified Java Programmer

PROFESSIONAL SUMMARY

Performance Engineering Lead with 20+ years across banking and healthcare. Defines SLAs/SLOs and workload models, leads load, spike, chaos and failover testing on Azure/AKS, and turns results into executive go/no-go decisions. Scaled Kaiser Permanente's pharmacy platform 10x across 400+ stores, managed a 30-member team at Accenture, and led performance engineering for TD Bank's core banking platform and document verification services. PMP- and SAFe-certified.

CORE COMPETENCIES

Program Strategy	Enterprise performance framework design, SLA/KPI/TPS definition, workload modelling, performance risk register, governance across multi-vendor programs
Load Testing	JMeter, LoadRunner Enterprise & Cloud — Web, Mobile, API, and Core Banking workloads
Mobile & Web	Selenium (incl. an in-house JavaScript framework), Puppeteer, Chrome mobile emulation
API & Middleware	REST/HTTP, SOAP, Postman, MuleSoft API layer testing, service virtualisation — CA DevTest, Ready API
APM & Observability	Dynatrace, Splunk, Datadog, Grafana, InfluxDB
Cloud & Container	Azure (AKS, App Services, Monitor), Docker, Kubernetes — HPA tuning, pod scaling, resource limits
CI/CD & DevOps	GitHub Actions, Jenkins — JMeter automation with threshold-based pass/fail, on-demand and build-triggered runs
Test Strategy	NFR definition, p95/p99 profiling, breakpoint, endurance, soak, spike, chaos/failover (Chaos Monkey), operability, fallback
Databases	Oracle, PostgreSQL, Cosmos DB — query plan analysis & tuning
Languages	Java (Spring Boot stub services), JavaScript / Node.js, Python, Shell Scripting, SQL
AI-Assisted Engineering	GitHub Copilot (test scripts, test data, and y4m camera-feed video generation), Ollama (local LLM analysis of test results)
Leadership	PMP, SAFe, Scrum — executive reporting (Power BI, Tableau), cross-functional teams, vendor management, mentoring

PROFESSIONAL EXPERIENCE

Performance Engineering Lead · TD Bank (Toronto-Dominion Bank)

Toronto, ON | November 2022 – Present

- Acted as the single point of accountability for performance engineering on TD Bank's core banking migration program (2022–2024) — a multi-workstream transformation serving millions of retail and commercial banking customers. Since 2024, leading performance testing for the bank's document verification services.

- Defined program-wide SLAs, KPIs, TPS targets, and latency thresholds for customer-facing Web and API endpoints; established governance processes covering workload modelling, test data management, environment readiness, and defect triage across agile workstreams.
- Pioneered TD's first performance testing for document verification by injecting live camera-feed input (document and selfie capture) with y4m video at runtime — no existing tooling could do it; later cut test-video generation from hours to minutes with a GitHub Copilot agent.
- Built UI performance scripts on the bank's in-house JavaScript/Selenium framework, using GitHub Copilot to generate scripts from recorded Puppeteer flows instead of hand-writing XPaths.
- Built GitHub Actions workflows for on-demand JMeter suites with automated response-time and error-rate thresholds, and Jenkins smoke tests on every PAT build.
- Ran chaos testing scenarios using TD's in-house framework — dependency failures, network latency injection, pod termination on AKS — validating resilience of core banking microservices before each production release.
- Identified a critical HPA misconfiguration through spike testing after production showed surges to ~2,000 TPS at the top of every hour against a 700 TPS tested peak; lowered the scaling threshold with the infrastructure team and validated corrected autoscaling behaviour.
- Right-sized ~40 Azure App Service apps on the core banking platform after utilization and capacity testing, saving about CAD 50,000 per month.
- Defined SLI/SLO targets and built Dynatrace and Splunk dashboards for p95/p99 latency, throughput and incident triage — giving release teams go/no-go signals and executives readiness scorecards.

Performance Engineering Lead / Manager · Kaiser Permanente (engaged via Accenture, then DXC Technology)

San Francisco, CA | August 2011 – October 2022

- Led performance engineering for Kaiser's Pharmacy Modernisation program across multiple vendor teams, agile workstreams and enterprise architecture stakeholders; validated on-premises-to-Azure and IBM Bluemix migrations using production traces as load models.
- Scaled the Kaiser Pharmacy platform 10x across 400+ stores within 24 months; tuned systems to sustain 3x peak demand during COVID-19 by proactively running Breakpoint and Soak tests before demand surges hit production.
- Designed a Video Conference Performance Testing Framework using LoadRunner, Selenium (Web), Java, and Power BI dashboards — providing executive-ready coverage across end-to-end latency, error rate, and throughput for 400+ stores.
- Integrated JMeter and LoadRunner into Jenkins CI/CD pipelines, embedding non-functional regression testing into sprint releases and catching performance defects earlier in the delivery cycle.
- Introduced dynamic test data via LoadRunner Virtual Table Server, enabling 24/7 endurance runs; reusable Citrix ICA scripting cut effort by ~60%.
- Used Dynatrace distributed tracing across pharmacy microservices to triage performance issues quickly through method-level hotspot analysis and transaction flow visualisation.
- Managed a 30-member performance engineering team in India at Accenture alongside onshore US teams; mentored test leads and set scripting standards adopted across vendor teams.

Performance Test Engineer · Tata Consultancy Services (TCS)

India & USA | April 2004 – August 2011

- Delivered performance testing for Bank of America, Citibank and Deluxe Corporation — resolved throughput and latency bottlenecks on high-volume banking applications; mentored engineers across US and India engagements.

PROJECTS

- Performance Testing Framework (github.com/jagsrj/perf-framework) — self-hosted JMeter console built with Node.js, Docker, PostgreSQL, InfluxDB and Grafana; versioned scripts, automatic baseline comparison, and local AI result analysis with Ollama.
